

Model 75

Precision Low Profile Load Cell

DESCRIPTION

Honeywell's Model 75 load cells are engineered for applications such as materials or product fatigue testing, which involve an extremely large number of cycles or occasional overload conditions. These fatigue rated load cells have load ranges from 50 lb to 200,000 lbs and achieve a non-linearity of 0.1% full scale. The superior design of these bonded foil, strain gage compression and/or tension load cells permits a fatigue life of 1 billion cycles (zero to full scale).

Model 75 measures tension/compression and must be used on a smooth flat surface to achieve rated specifications. The tension/compression Model 75 is designed with the threaded hole running completely through the center of the cell. Model 75 utilizes two stabilizing diaphragms, which are welded to the sensing member to reduce off-center and side-loading effects.

FEATURES

- 0.10 % accuracy
- 50 lb to 200000 lb
- mV/V output (standard); 4 mA to 20 mA or 0 Vdc to 5 Vdc (optional) outputs
- Stainless steel
- Double diaphragm design
- Enhanced overload capacity
- Intrinsically safe available (2N option only)⁸
- CE approved⁹

TYPICAL SYSTEM DIAGRAM

NOTES

1. C dimension varies on high ranges. Consult factory.
2. Allowable maximum loads - maximum load to be applied without damage.³
3. Without damage - loading to this level will not cause excessive zero shift or performance degradation. The user must consider fatigue life for long term use and structural integrity. All structurally critical applications (overhead loading, etc.) should always be designed with safety redundant load paths.
4. Interconnecting shunt cal. 1 terminal with shunt cal. 2 terminal provides 50 % (unamplified units), 75 % (4 mA to 20 mA three-wire units) or 80 % (voltage amplified units) of full scale output for quick calibration. Shunt calibration comes standard with internal amplifier option 2a, 2b, 2c, 2t and 2j.
5. O=Orange; Y=Yellow; B=Blue; Bl=Black; R=Red; Br=Brown; W=White; G=Green. Color specifying cable and number or letter specifying connector.
6. No mating connector necessary for cable option.
7. Consult factory for TEDS availability with amplified models.
8. Range dependent; consult factory. Termination dependent; consult factory.
9. Internal amp and termination dependent; consult factory.
10. This unit calibrated to Imperial (non-Metric) units.
11. Input/output isolation only available with voltage output (2b or 2c) amplifiers.
12. 5000 ohm bridge required.
13. Cannot be used with amplified option.
14. Cannot be used with options 1c, 1e, 1f, 1g, 1h, or 1i.
